

PRODUCT CATEGORY - DRESSINGS

Hydrogels: Impregnated

Impregnated hydrogel wound dressings are gauzes and non-woven sponges, ropes and strips saturated with an amorphous hydrogel. Amorphous hydrogels are formulations of water, polymers and other ingredients with no shape, designed to donate moisture to a dry wound and to maintain a moist healing environment. The high moisture content serves to rehydrate wound tissue. Indicated for partial- and full-thickness wounds, wounds with necrosis and deep wounds with tunneling or sinus tracts. Available in a wide variety of sizes.
